REPORT NO.

REFERENCE COPY

1. The airfield was about 800 x 1,200 meters, and was located about 2 kilometers north of Bucha (50°32'N/30°11'E), in level terrain having small wooded areas. There were no runways or taxiways. Obstacle lights were available.

2. The following buildings were on the eastern edge of the airfield:

- a. A large solid hangar
- b. Three large barracks buildings
- c. A round brick water tower, visible from afar

3. The airfield was occupied by about 25 twin-engine aircraft (radial engine, single rudder assembly, full-view cockpit).

4. There was day and night flying with individual aircraft.

Comment :

- a. As this is the first information on the Bucha airfield its correctness cannot be verified and confirmation is required.

- b. From the reported statements it is concluded that the airfield is a home field occupied by a twin-engine bomber regiment during the period of observation.

1 Annex: Bucha Airfield.
